**IS ALWAYS  
BETTER!**

# SMI COLD THERAPY

Active Rehab

## Cost Effective

- Low patient cost
- Standardization of patient care

## Safe

- No electric cords, hoses, or leaks

## No Condensation

- Moisture-wicking, anti-microbial liner

## No Ice Cubes or Water

## High Staff & Patient Compliance

## Effective Compression

- Superior cold delivery and edema reduction

## Complete Patient Mobility

## High Standardization of Care

- Cost effective, all body sites
- Inpatient/Outpatient

# Cumbersome Cooling Machines

Passive Rehab

## Expensive Unit Cost

- High patient cost
- High staff intervention

## Safety Concerns

- Trip Hazard, Leaky disconnects

## Wet Surgical Sites

- Condensation and leaks

## Ice Cube/Water Regimen

- Hassle for nursing staff - messy cleanups

## Low Staff & Patient Compliance

## No Compression

## Limited Patient Mobility

## Low Standardization of Care

- Expensive, limited body sites

# Ineffective Ice Bags

Passive Rehab

## Expensive Protocol

- High staff intervention
- Additional expenses for other modalities

## Safety Concerns

- Trip Hazard, Melted Ice

## Wet Surgical Sites

- Condensation and leaky bags

## Ice Cube/Water Regimen

## Low Staff & Patient Compliance

## No Compression

- Ineffective cold delivery

## Limited Patient Mobility

## Low Standardization of Care

- Ineffective at controlling post-op pain & edema

**A clear choice for patient care and clinician acceptance!**

**Nationally Acclaimed and Clinically Verified to Reduce Post-Op Pain and Edema**

Eliminating Nurse and Patient Post-Op Hassles

*“Easy to use, great multi-modal option for pain control”*

- Nurse Navigator-Major West Coast Ortho Program

*“Has improved overall patient satisfaction, decreased nursing workloads, and improved compliance and ice use.”*

- Nurse Manager-Major East Coast Joint Replacement Program
